Inspection

Type: ROUTINE INSPECTION

Date: DEC-20-2008

**MEDICAL CENTER BOULEVARD
WINSTON SALEM, NC 27109**

3.80 (b)(2)(1)

PRIMARY ENCLOSURES.

The minimum space that must be provided to each nonhuman primate, whether housed individually or with other nonhuman primates, will be determined by the typical weight of animals of its species, except for brachiating species and great apes /3/ and will be calculated by using the following table: Group 4: Male macaques and large African species require at least 6 sq. ft. of floor space.

***One large male Rhesus macaque was housed in a cage providing only 5 sq. ft. of floor space. This did not provide adequate space, even though the cage did provide extra height (double vertical cage). Need to ensure that all large male Macaques have at least 6 sq. ft. of floor space to allow adequate freedom of movement. Corrected by end of inspection.
