NECROPSY REPORT

Attachment A
Accession No. 8712
Recorded by: Personal Info

Tattoo No.: A155F Project No.: 8712 Weight (kg): 58.55
Species: PAN Study No. (if App.): N/A

Birthdate: Apr 1983 estimated actual

Sex: M F Date of Death: 09 / NOV / 2007
Above information entered by: Personal Info dd mmm yyyy
Date: 09 Nov 07

Reason for Examination:	Condition of Specimen:	Physical Condition:
Natural Death <input type="checkbox"/>	Fresh <input checked="" type="checkbox"/>	Excellent <input type="checkbox"/>
Euth. -Moribund <input checked="" type="checkbox"/>	Refrigerated <input type="checkbox"/>	Fair <input type="checkbox"/>
Euth. -Project <input type="checkbox"/>	Autolysis <input type="checkbox"/>	Poor <input checked="" type="checkbox"/>

Observed Gross Pathology: Date of Exam: 09 / Nov 07
dd mmm yyyy

Externally, this chimpanzee is thin and there is apparent muscle atrophy of the limbs; the abdomen is distended, particularly the cranial R quadrant.

Internally, the R lung contains areas of ecchymotic hemorrhage particularly of the posterior lobes. Both lungs are fully inflated. There is approximately 2L of pleural fluid and an extensive cardiac tamponade apparent, with fibrin tags. The heart is dilated and the aortic valve has endocarditis. The liver is large and pale yellow with an accentuated lobular pattern. There is a large depressed area (2cm diam.) adherent to the body wall. On cut surface, a greenish purulent material is present. There is an obvious necrotic center, possibly indicating neoplastic process. Only the R kidney could be identified, and it is pale. The colon is segmented by areas of mucosal atrophy, leaving a very fragile serosa in place. Peritoneal fluid is present - approximately 7L - clear to sanguinous.

Tissue Disposition:

- Adrenals _____
- Bladder _____
- Blood _____
- Brain _____
- Eye(s) _____
- Gall Bladder _____
- Heart 1
- Intestines:
 - Duodenum _____
 - Jejunum 1
 - Ileum _____
 - Cecum _____
 - Colon 1
 - Kidney 1 Left only
 - Liver 1
 - Lung 1
- Lymph Nodes:
